Abstract – RLD - Real Estate Commission Project

The purpose of this project is to analyze the existing system and implement the necessary functionality in License2000 and MyLicense to allow the Real Estate Commission to offer online services, specifically online license renewals.

The changes implemented in the system will also allow other groups to take advantage of the investment. These groups include Alcohol and Gaming, Financial Industries, Pharmacy, Barbers and Cosmetology, and possibly others.

The RLD IT team will

- Manage the project and conduct the necessary system analysis to determine the best approach to implementing the desired functionality.
- Collaborate with the software vendor, System Automation, to implement the changes.

The IT team and the Real Estate Commission will be responsible for system testing and project closeout.

(This project simply serves to upgrade a software package that is already in use at RLD. Therefore, this project will not be put out to bid for any other vendors as they will not and cannot have access to change the commercial off-the-shelf software owned by System Automation.)

The key business needs addressed by the implementation of this project for the Real Estate Commission are:

- on-line pre-licensing and continuing education courses,
- computer-based training, and
- direct access to the licensee data base by education providers for purposes of tracking and recording required broker education, particularly education requirements.
