New Mexico Automated Fingerprint Identification System (AFIS)
AFIS is a combination of hardware and software providing an image repository for civil/applicant and criminal fingerprints for background checks and forensics latent examinations.
NEW MEXICO AUTOMATED FINGERPRINT IDENTIFICATION SYSTEM

- MorphoTrak AFIS in use today is over 8 years old and End of Life

- DPS has reviewed several options for replacement including joining the Western Identification Network and upgrading the existing MorphoTrak system

- DPS came to the conclusion that upgrading was in the best interest of DPS and the State.
NEW MEXICO AUTOMATED FINGERPRINT IDENTIFICATION SYSTEM

- DPS worked with the vendor MorphoTrak and collaborated with the Albuquerque Police Department to share a hosted AFIS system.

- DPS requested and received a sole source exception from the State Purchasing Division of General Services Department to retain MorphoTrak as the AFIS service provider.

- DPS will fund the cost of the system with regular annual maintenance.
The most significant impacts of this service agreement with MorphoTrak

- Greatly improved system performance, support and availability
- Predictable costs. Cost will remain constant over the length of the maintenance contract.
- Collaboration across agencies (DPS, APD and El Paso, TX PD)
MorphoTrak will provide AFIS as a service from a fully redundant hosted system to include a disaster recovery site. MorphoTrak will manage all hardware and software upgrades, system expansion and support as required under the maintenance contract. The system will provide database sharing between DPS, APD and El Paso PD. No cost increases for service for the length of the 8 year sole source.
